

# How to:

# Scrub and Strip Floors

## Floor Scrubbing / Stripping

1. Dust mop area.
2. Position wet floor signs.
3. Dilute scrubbing or stripping solution (according to directions) in one bucket, and the rinse solution in another bucket.
4. Divide floor area into work sections.
5. Apply solution to floor using wet mopping procedure. Let solution sit 5 - 10 minutes.
6. Scrub floor with rotary machine using proper pad. (See Tip 1) This procedure will insure area has been double scrubbed which will eliminate streaking and highlights.
7. Floor area has been divided into sections keeping in mind: where will the traffic go? (See Tip 2 Below) How large an area can be managed in a reasonable length of time. **(Do not let stripper dry!)**
8. Pick up scrubbing / stripping solution with wet vac - section by section before floor dries. (Or solution can be picked up with a mop changing water often).
9. Repeat steps 4 through 8 on one section of the floor at a time until the entire floor has been scrubbed / stripped.
10. Rinse Immediately. (See Tip 3 Below)
11. Clean Up: Wash mops in clear water and hang up to dry. Rinse wringers and buckets. (Leave buckets upside - down). Soak pads in solution and rinse. Wipe off machines and take off pad holder.
12. Put away wet floor signs away when floor is dry.

### Tip 1:

#### Floor Pads

- Black for Stripping
- Green for Deep Scrubbing
- Blue for Scrubbing
- Red for Light Scrubbing

### Tip 2: Floor Section Steps

- First Pass : Scrub left to right and then scrub back over same area right to left.
- Second Pass: Scrub left to right. Overlap 1/3 width of brush.
- Third pass: Blend areas scrubbed in the first two passes, using overlapping counterclockwise loops.

### Tip 3: Rinse after Stripping.

- First Rinse: Section by section, put down neutralizing solution.
- Second Rinse: Put down clear tepid water and pick up with wet vac or mop.
